## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1, 2, 7-9, drawn to a method for the treatment and/or prophylaxis of renal colic or the pain associated therewith.

Group II, claims 1, 3, 7-9, drawn to a method for the treatment and/or prophylaxis of biliary colic or the pain associated therewith.

Group III, claims 1, 4, 7-9, drawn to a method for the treatment and/or prophylaxis of functional dyspepsia or the pain associated therewith.

Group IV, claims 1, 5, 7-9, drawn to a method for the treatment and/or prophylaxis of Barrett's metaplasia or the pain associated therewith.

Group V, claims 1, 6-9, drawn to a method for the treatment and/or prophylaxis of dysphagia or the pain associated therewith.

2. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the requirement of unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. In the instant case, a

Art Unit: 1654

vanilloid receptor antagonist would be considered the special technical feature that links the different method inventions, however, vanilloid receptor antagonists are not a contribution over the prior art, wherein the vanilloid receptor antagonists are known in the prior art as taught by Szallasi et al. (1993; J. Pharmacol. Exper. Therap. 267(2):728-733). Szallasi et al. teach the use of the synthetic capsaicin derivative, capsazepine, as an analog of the vanilloids that is a binding-site competitor at the vanilloid (capsaicin) receptors of the rat. Therefore, no special technical feature exists and unity of invention is lacking.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hugh P. Young whose telephone number is (571)-272-4988. The examiner can normally be reached on 8:00 AM - 5:00 PM.
